

General Description

The DW01 battery protection IC is designed to protect lithium-ion/polymer battery from damage or degrading the lifetime due to overcharge, overdischarge, and/or overcurrent for one-cell lithium-ion/polymer battery powered systems, such as cellular phones.

The ultra-small package and less required external components make it ideal to integrate the DW01 into the limited space of battery pack. The accurate $\pm 50\text{mV}$ overcharging detection voltage ensures safe and full utilization charging. The very low standby current drains little current from the cell while in storage.

Features

- Reduction in Board Size due to Miniature Package SOT-23-6.
- Ultra-Low Quiescent Current at $3\ \mu\text{A}$ ($V_{\text{CC}}=3.9\text{V}$).
- Ultra-Low Power-Down Current at $0.1\ \mu\text{A}$ ($V_{\text{CC}}=2.0\text{V}$).
- Precision Overcharge Protection Voltage $4.3\text{V} \pm 50\text{mV}$ for the DW01 Plus
- Load Detection Function during Overcharge Mode.
- Two Detection Levels for Overcurrent Protection.
- Delay times are generated by internal circuits. No external capacitors required.
